

New World Screwworm

Detected in United States

The New World Screwworm has been confirmed in Texas & New Mexico

WHAT TO KNOW

- This pest feeds on living tissue & can infect livestock, pets, wildlife and people
- This pest does NOT impact Oklahoma's food supply
- Oklahoma beef, pork & poultry are safe to eat

TRAVEL RESTRICTIONS

- Any species traveling from an Infested State, but not an Infested Zone, can enter Oklahoma with a CVI that includes a statement "All animals in shipment do not originate from or transit through a NWS Infested Zone."
- Any species that originates from an Infested Zone will need to meet the movement requirements for the state of origin AND obtain a permit from the Oklahoma State Veterinarian's office AND have a CVI that states "all animals listed were individually inspected and found free of wounds."
- Any species that originates from an Adjacent Surveillance Zone will need to enter Oklahoma on a CVI issued within 5 days of movement that includes a statement "all animals listed were individually inspected and found free of wounds."

If a case is suspected, contact the State Veterinarian's office at 405-522-6141, your County OSU Extension Educator or veterinarian
